

# SimNet 8

## Universal Global Idea Management Software

*Always the Perfect Fit, Always the Perfect Solution*

### Employee Engagement Meets Innovation

SimNet 8 is the first idea management software to successfully bridge the gap between employee engagement and innovation. Now, whether you are seeking cost savings, process improvement, increased revenues, or new product development ideas (or all of the above) from the entire company or just a small group, SimNet helps you build a culture of innovation.

### A Universal Global Solution

SimNet 8 is the only idea management software that can work around the world, with any currency and any language. It can even convert currencies! Now, your entire global enterprise can be linked into a single system, yet every country, region, or locality can have its own site. Local 'look and feel' with global capability – there is nothing else like it and nothing else is good enough.

### A Real Reward and Recognition System

While other idea management systems claim to have rewards, only TQS really understands motivation and recognition, and how they differ from culture to culture. We have 23 years of experience designing recognition programs. No one else even comes close. So, if you want your idea management system to really motivate and perform, SimNet 8 is your choice.

### It All Fits Together - Intuitively

We define Innovation as an umbrella of all the activities that help an organization meet financial or other goals that cannot be achieved by maintaining the status quo. In fact, we are truly living in an innovate-or-die world, and unless you integrate innovation into all areas of your organizational culture, you have little chance of success. SimNet easily manages the wide-range of innovative ideas coming from a variety of sources and for different reasons.

### Flexibility Provides The Cost-Effective Solution

SimNet 8 costs about the same as other major idea management systems, but it does so much more. Software functionality can be defined by each user, group, facility or division. Multiple programs can be easily managed in a single central database - innovation, continuous improvement, cost reduction suggestions, corrective actions, safety, team projects, and recognition. That means higher ROI, employee satisfaction, and better results.

### Individuals and Teams!

SimNet 8 is the only idea management software suitable for both individual and team use. Individuals enter their ideas, while teams work together to meet product development, Six Sigma, Kaizen, and other goals. Plus SimNet has built-in collaboration tools so people can share and network on ideas and team projects. This allows the right ideas to be 'found' and implemented.
